Claim Objections

1. Claim 7 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 7 is currently dependent upon "claim 7 or claim 8". It appears as if this is a typographical error and that, in fact, applicant intended to claim dependency upon claim 5 or claim 6, both of which recite the "support body" referenced by claim 7.
2. Claims 5-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim shall not depend upon another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Nightingale (GB 2,042,340).

Nightingale teaches a fragrance cartridge **18** comprising a reservoir **19** of fragrance and capillary channels **20** for controlling emission of fragrance from the device (Figure V; page 1, lines 39-43). The fragrance is prevented from leaking from the reservoir by capillary action. See

page 1, lines 58-59. The capillaries may be 0.4mm in diameter and 20 mm long. See page 2, lines 59-61. Moreover, Nightingale evidences that the emission rate is just over 27.8 ng/s (0.1 mg/hr). See page 3, lines 5-7.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Coplan et al. (US 4,017,030) discloses a capillary emission device.
